- Director of Breast Care & Research

# Breast & Ovarian Cancer Prevention Program

## WHO WE ARE

---

Hoag Breast & Ovarian Cancer Prevention Program is elevating the standard of care for “previvors,” women who have tested positive for a genetic mutation that increases their risk for breast and/or ovarian cancer.

Previvors have specific needs for reducing their risk for cancer including:

- Increased surveillance with mammogram and MRI
- Chemoprevention
- Surgical prevention

Hoag is proud to offer these women more than medical management. We are treating the entire woman – mind, body and soul with a holistic approach and multidisciplinary team of experts.

Our team includes specialists in breast care and gynecology, sexual and mental health, genetic counseling, risk reduction, navigation, meditation & mindfulness, fitness, and nutrition. Meet the team of experts on the reverse side.

PREVENTION

FITNESS

SURVEILLANCE

MEDITATION

NUTRITION

MENTAL HEALTH

The Hoag Breast & Ovarian Cancer Prevention Program team meets monthly to discuss patient cancer risk reduction strategies and outcomes, ensuring the patients have access to the most advanced medical and surgical options and receive the wellness advice and support they need to handle real life issues involving reproduction, stress, diet and exercise.
